Professor Hayes has been my favorite professor for math so far. He's very good at explaining topics, reinforcing them, and going at a good pace. I always learned a lot from his lectures and I made an effort to always be there and be paying attention.

Insanely good teacher. Best of the semester for me. It certainly helps that it was a small class, but every lecture felt easily understandable and connected to each lesson.

Professor Hayes was wonderful. Always willing to help, at any point whether it was during class, after class and in office hours. I have no complaints.

N/A

I had an absolutely wonderful time in Professor Hayes's class. What should have been difficult to grasp concepts were made crystal clear. He made what we were learning fun and engaging. I'd say his class renewed my excitement for math.

I think the professor explains the topics very well and is one of my best instructors this semester.

10/10 Rate My Professor review! One of the BEST math professors I have ever had and I am so glad this course was taught by Dr. Hayes!

Dr. Hayes was my favorite professor this semester. He explains things well and has a lot of patience for us as we work to understand the material. He was always available to help and work with you on coursework. Very fair and understanding.

This man is always prepared and will explain the same thing several different ways if we didn't understand.

Absolutely amazing professor. Understands the concepts and is able to easily convey them to students. He is friendly and always willing to help students. He always makes sure that we understand the concept before moving on and will consistently ask us if we have any questions. Discusses the application of the math and not just theory. He always helped us with questions that we didn't understand and responded very quickly to emails.

N/A

He was a good instructor.
