N/A

very good at explaining

Awesome, loved the class even if it was difficult.

Can take very difficult topics and make them digestible. Brought an amazing energy to class that conveyed his appreciation for the subject.

Great professor

My favorite math professor here at UD. Always graded things very fast, prepared us well for exams, and broke things down into things I could understand.

One of my favorite math professors at UD

Best instructor I have ever had throughout my 4 years. Makes very difficult math concepts much easier to understand (even for people who may have not learned some topics). Also, he is very personable, caring, and a great guy overall! (Kind of makes me like math... which I never thought I would say).

Dan is very clear in his assignments, grading, and communication overall!

Honestly, one of the best Math professors I have had during my time at UD.

Great professor who explains the material very well

He is very understanding and open to communicating information at all time for students.

NA

Prof Hayes is definitely a great instructor. I have found that hard to come across during my time at UD. You can tell he enjoys what he is teaching. He made expectations for exams clear.

This was one of the best math classes I've taken. I found it to be appropriately challenging but Dr. Hayes provided many resources and spent appropriate amounts of time explaining the content. It was a genuinely enjoyable class and I would recommend it to other students, and I'd definitely take a course with Dr. Hayes again.

Hayes is an incredible instructor. His class is extremely well-organized. His lectures are the most consistently engaging I've ever had over the semester. I have literally nothing bad to say about him.

Put in grades almost instantly, responded to emails in a timely manner, always asked questions, and prepared for class. One of my favorite math professors here at UD.
