Had a very fun and entertaining math class

The best non professor I have ever had. Dan takes the time to make sure that all of his students are on the same page. Dan is better at teaching calculus then the other two professors that I have had to take prior. He makes math easy and fun. I look forward to learning when dan is teaching.

Dan is one of my favorite professors at the university!!

Very good instructor

Fantastic this guy is soo good give him a raise

very good professor, took this class 2 other times with other proffessors and had to drop it. He does a very good job explaining as well as keeping the class engaged.

Easily the best math teacher I've ever had, explained concepts extremely well, made the class enjoyable and would tie concepts together to make it more clear. Didn't make the class impossible and actually made learning fun and made it make sense, even on the more difficult topics.

none

One of the best math teachers I've ever had. He teaches in a way that makes it easier to understand the material, and is always more than happy to help if you don't understand something.

none

Great instructor.

None

One of the best math professors I have had. Explains everything well always asked students if they had any questions and was always very helpful!
